

Final Project State Diagram

Mina George
Eric Ha

initial state: elevator is at floor 0

events: button for desired level is pushed

next state: desired floor

l = current level

b = desired level

Note: cannot go from $0 \rightarrow 2$ directly or $2 \rightarrow 0$

ex) if $l=0$, $b=2$. Go to B then to C (B is intermediate)
↳ should pass through B without requiring another input

--- means intermediate step, automatically passes through
